SUMMARY

Full-stack engineer with over 10 years of experience across backend, databases, web, mobile, and deployment, basically whatever a project needs. Since 2022 I've also done a lot of applied AI work: LLM agents, RAG and semantic search, speech-to-text pipelines, and computer vision. Current stack is mostly Python/FastAPI, Nuxt.js, and Flutter.

SKILLS

AI / ML: LLM agents, RAG, semantic search, vector databases (pgvector), speech-to-text (whisper.cpp), computer vision (YOLO, OCR), image generation (ComfyUI, Blender), cloud LLM APIs (OpenAI, Google Gemini), self-hosted inference (llama.cpp), AI coding agents (Claude Code, Hermes Agent)

Backend: Python, FastAPI, Celery, REST APIs, WebSockets, async processing, Java/Spring Boot

Frontend / Mobile: Nuxt.js, Vue.js, TypeScript, Quasar, Flutter, Dart, iOS, Android, native device APIs (camera, GPS, barcode scanning)

Database: PostgreSQL, MS SQL Server, Redis, vector databases

Infrastructure: Docker, Nginx, Linux, GPU server deployment, CI/CD (GitHub Actions), AWS, GCP

Data / BI: Power BI, Tableau

EXPERIENCE

Data Scientist, CTN Health (Remote, USA)

Oct 2026 – Present

- Working on AI-driven healthcare tools, including clinical documentation and HL7/FHIR-based data interoperability.

Full-Stack Developer, Fard Systems (Remote, USA)

Mar 2023 – Sep 2026

- Tire Studio**, an internal Photoshop-like tool that turns raw warehouse tire photos into consistent, catalog-ready product images, combining Blender rendering with AI image-generation pipelines in ComfyUI. Designed and built both the frontend and backend.
- BTS AI**, a chat-based analytics tool for managers, using field data from a mobile app I also built. Moved visit data into Postgres, added sentiment labels, and built a chat interface so managers can ask plain questions instead of digging through spreadsheets. Later extended it with a RAG-based chat interface for company policies.
- BTS Notes**, one Flutter app every department (sales, HR, regional managers, and more) uses daily to record their work, offline and on the road, across iOS, Android, and desktop. Each team's questions come from the database, so new ones don't need an app release. Also handled the App Store and Play Store release process.
- CallScribe**, a daily call-analysis pipeline that transcribes customer service calls with whisper.cpp, detects speakers, and corrects industry-specific errors. It scores agents against the company's training checklist and writes results back to the existing SQL Server database.
- FS Tire Inventory**, a computer-vision tool that counts tires and reads their labels from a phone video of a warehouse shelf, using a custom-trained YOLO detector and two OCR engines to cross-check results, with uncertain readings sent for manual review.
- AGM Office**, an internal project-management tool covering cost tracking, approval, and billing, with role-based permissions and integrations with Monday.com and the company's online store. Also built **FS Phone Screen** (CRM pop-up on incoming calls) and a Telegram bot for B2B tire ordering.
- Fard Systems TV**, a Flutter kiosk app for Android TV devices. Also created an AI service that reads incoming Google reviews, figures out the sentiment, and drafts a response, replacing a daily manual task.

EARLIER EXPERIENCE, IRAN (2009 to 2022)

Team Lead & Strategist, WebGostar

2020 – 2022

- ERP suite:** managed a team of 5 backend and frontend developers on a system covering accounting, project management, CRM, procurement, and risk management. Designed the approach for moving data from different sources into HDFS through Apache Kafka.

Software Designer, WebGostar

2017 – 2020

- Warehouse Management System:** worked in Java and Java EE, including a Flutter mobile app for barcode-driven receiving and cycle counting. Trained the development team during construction and used AWS (EC2, S3, IAM, RDS, Lambda, CloudWatch).

Software Developer, WebGostar

2012 – 2017

- Built RESTful APIs with Java Spring Boot serving a Vue.js web app and Flutter mobile apps. Worked with both RDBMS and NoSQL databases, and tested and documented processes using Acunetix.

Software Engineer, Sharif University

2009 – 2012

- HRMS:** developed an HR and attendance management system in Java.

EDUCATION

Bachelor of Software Engineering, 2004 – 2008, Iran
